Performance without equal

By drawing on the rich vein of sports performance that's embedded in Yamaha's thoroughbred DNA, our designers have developed from the ground up a class of off-road vehicle that brings pure-sports excitement to the SxS world.

Rather than following conventional thinking, Yamaha's engineers designed an innovative 3-cylinder engine and manual gearbox, placed it in a protective chassis and equipped it with the most advanced long travel suspension system in the class.

And, by completing the package with On-Command® drive, an ergonomic fighter-pilot style cockpit, bucket seats and aggressive styling, the YXZ1000R offers performance without equal.

High-performance 3-cylinder engine

Designed and engineered as a pure-sports off-road vehicle, the YZX1000R introduces a new level of supersport-class engine performance. With an ultra-compact 3-cylinder layout, the 998cc DOHC engine delivers breathtaking acceleration up to its thrilling 10,500 rpm red line, creating a whole new class in the SxS world.

Electronic Fuel Injected (EFI)

The triple 41mm diameter throttle bodies feed the engine through 4-hole fuel injectors. The instant throttle response provides immediate power when you want it, adding excitement to the ride.

5-speed sequential gearbox

The 5-speed manual gearbox with reverse complements the high-performance character of the engine. The rally-style sequential shift enables ultra-fast gear shifting for awesome acceleration, allowing you to use the power and torque where you want and when - and the durable drivetrain gets power to the wheels with minimal transmission loss.

Pure sports chassis

The light and compact tubular purpose-built steel chassis is constructed using optimized dimensions to ensure class leading handling performance and outstanding durability. An overhead protection system with sun top is fitted as standard, and its tubular structure offers high levels of security with good visibility for the driver and passenger.

Aggressive design

Featuring a shark-like nose with massive Fox Podium RC2 shocks jutting through the hood as well as a low front end and a high tail, the bodywork gives an aggressive and predatory look. The low front also gives you and your passenger an excellent view on the terrain in front of the machine to see and go where you want for the ultimate off-road experience.

State-of-the-art suspension

The Fox 2.5" Podium RC2 piggyback shocks give a huge 406mm of front wheel travel with a massive 432mm rear wheel travel for class-leading ride quality and handling performance. Fully adjustable for spring preload, rebound and high/low speed compression damping, this system can be dialed in to handle virtually any situation.
